Art Unit: 2811

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-13, 21, drawn to an electrical device package, classified in class 257, subclass 667.
 - II. Claims 14-20, drawn to a method of reducing crosstalk in a lead frame based electrical device package, classified in class 438, subclass 22+.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, in claim 14, attaching a die and a plurality of lead fingers to a temporary substrate, then attaching a die pad to the die and a conductive sheet to the die pad, the conductive sheet is spaced from a subset of lead fingers, and remove the die from the temporary substrate.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
